

Tech Tip

Map readers

In this article BHP UK take us through the steps involved with performing a remap using the 'Genius' ECU programmer.

With ease of use and convenience in mind, BHP's ECU programmer has been designed to read and program vehicle ECUs through the car's diagnostic port – meaning 99% of the time there is no need to dismantle the ECU or remove it from the car.

A standalone system that does not have to be plugged into the computer while you read and program the ECU, the 'Genius' offer comes complete with its own dedicated computer software that allows users to send ECU data directly to the team at BHP UK

with the press of a single button. In fact, there isn't even the need to open an email program to send the map to.

Training and technical support

Although the programming system is incredibly user-friendly and easy to use, the folk at BHP UK realise that for any business to succeed in ECU tuning they will need both training and continued technical support.

That's why all new BHP UK dealerships are given training on how to use the tool and its computer software correctly. This is

provided on a one-to-one basis which means that you can learn at your own pace and any questions you have can be answered directly.

After the initial training has concluded, continued technical support is provided with regular 'refresher' seminars to help keep customers informed of the latest changes to modern car technology.

Finally when you become a BHP dealer, you become a member of a hard working and dynamic team with a huge knowledge base and resources to help you stay at the forefront of the tuning industry.
